Momentum Global Investment Management (Company Registration No. 3733094) has its registered office at The Rex Building, 62 Queen Street, London, EC4R 1EB.

Momentum Global Investment Management Limited is authorised and regulated by the Financial Conduct Authority in the United Kingdom, and is an authorised Financial Services Provider pursuant to the Financial Advisory and Intermediary Services Act 37 of 2002 in South Africa.

Market Commentary

Despite a mid-month wobble in the US equity market, it was another benign month overall for equity markets and most risk assets made further upward progress, continuing the pattern of performance since Trump's election success. Volatility remained remarkably low, and equities again outperformed bonds. The most notable moves included a change in leadership within equity markets, with Europe meaningfully outperforming the US, credit marginally outperforming sovereign bonds (which posted flat or negative returns), and a renewed slide in the US dollar against most currencies, leaving its trade weighted index down by 1.8% year-to-date. Despite further evidence of strengthening global growth, commodity markets were generally weak, notably the price of WTI oil declined by 6.3% over the month. A combination of accelerating growth and a weaker dollar helped emerging markets to another strong month, leaving them as the best performing equity market year-to-date (posting a total return of 11.4%).

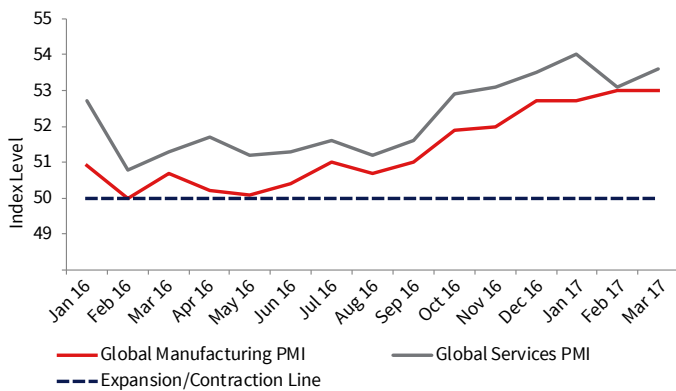

Figure 1: European equities outperform

The key fundamental factor underpinning markets both this month and throughout the first quarter has been the clear and continuing evidence of improving global growth, best illustrated by strong PMIs (Purchasing Managers' Indices) from almost all countries, as well as rising trends in consumption.

This has provided a good environment for corporate profits, with earnings rising by close to 10% in Q1 in the US, which has in turn underpinned risk assets, particularly equities, as well as high yield bonds and emerging market debt. It also gave investors the confidence to absorb the US Federal Reserve's (Fed's) second rate rise since the financial crisis without concerns, despite the fact that this move had been largely unexpected until very recently, when the weight of economic evidence and the continuing strength of the labour market caused the Fed to bring forward the timing of its move. Importantly, however, the Fed left the predicted pace of policy tightening unchanged, a factor which provided support to markets.

Figure 2: PMI's indicate upwards trending global growth

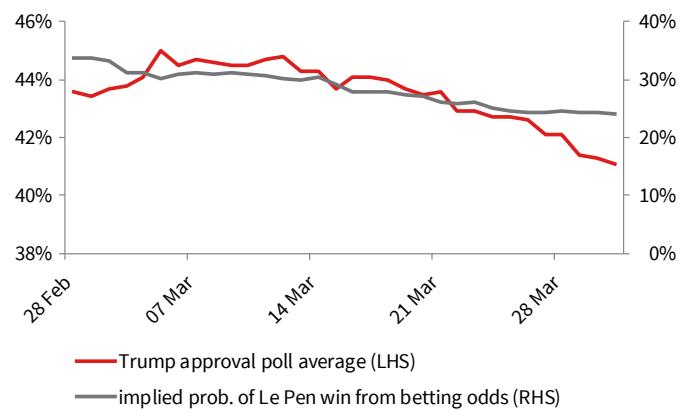

Offsetting the rising confidence and the 'Trump reflation trade' in the US, was the first meaningful setback to the President's bold campaign commitments. The attempt to overturn so-called 'Obamacare' failed in Congress, being unable to garner a necessary level of support despite the Republican majority in both Houses. While the policy itself was not considered particularly important to the general investor, it raised serious concerns that Trump would find it arduous to pass and implement the key tax reforms that investors have been hoping for, and thereby defer any boost to growth that these reforms would be expected to deliver. This initiated a stumble in US equity markets, and heralds a likely period of consolidation after the steep post-election rally enjoyed by US stocks.

At the same time European stocks enjoyed a very strong month, helped by economic data that surprised on the upside as well as an improving political backdrop. In the Netherlands' general election, the far-right, anti-immigration party failed to make sufficient progress to disturb the potential for current centrist parties to form coalition government. Support for Marine le Pen in France's Presidential election also appears to have peaked, leaving her chances of winning the second round of voting in May diminished. Focusing on economics, the European Central Bank now faces a difficult balancing act, as despite stronger growth, inflation remains sluggish. The Bank continues to hold interest rates below zero and is committed to maintaining

substantial quantitative easing through the year, even after a planned tapering of its bond buying programme from 1st April. Even so, the first evidence of a slightly less dovish approach helped to support the euro, which, perhaps surprisingly, is now up by 1.3% versus the USD so far this year. This is despite the very substantial interest rate differential in favour of the dollar.

Figure 3: Miserable March for Trump & Le Pen

Returning to politics, the UK triggered a very difficult two-year period of negotiations with the EU to determine the conditions of its departure from the bloc in March 2019 by invoking Article 50. Markets took this pre-empted move in their stride and the UK economy continues to perform well above the levels expected by most economists before the referendum. However, uncertainty levels are high and UK markets are vulnerable to the ebbs and tides of the negotiations, at least until the broad nature of the UK's exit terms, and crucially its future trading relationship with the EU, are clearer. For now sterling has been steady against both the USD and EUR so far in 2017. It is a fundamentally undervalued currency after its sharp post referendum falls, but upside is likely to be capped by the uncertainty ahead.

Markets have performed well this year, and have risen sharply since the US election. The evidence of higher growth has been encouraging and many of Trump's policies are market friendly. However, we are now at the stage where the detail of policy will begin to be scrutinised and we will be able to gauge the extent to which it will be successfully implemented. In general then, policy uncertainties remain high. And with valuations high, the market is vulnerable to a correction, and the long period of subdued volatility that we have enjoyed over the past few months will surely be tested before too long.

This cycle is particularly long, however, and it will be important to stay invested; anything less is likely to lead to disappointment. Opportunities for returns outweigh the risks, and we expect equities to continue to outperform bonds through 2017. Indeed, periodic bouts of weakness in equity markets will present buying opportunities.

Important Notes

This document is only intended for use by the original recipient, either a Momentum GIM client or prospective client, and does not constitute an offer or solicitation to any person in any jurisdiction in which it is not authorised or permitted, or to anyone who would be an unlawful recipient. The original recipient is solely responsible for any actions in further distributing this document, and in doing so should be satisfied that there is no breach of local legislation or regulation. This document should not be reproduced or distributed except via original recipients acting as professional intermediaries. This document is not for distribution in the United States.

Prospective investors should take appropriate advice regarding applicable legal, taxation and exchange control regulations in countries of their citizenship, residence or domicile which may be relevant to the acquisition, holding, transfer, redemption or disposal of any investments herein solicited.

Any opinions expressed herein are those at the date this document is issued. Data, models and other statistics are sourced from our own records, unless otherwise stated. We believe that the information contained is from reliable sources, but we do not guarantee the relevance, accuracy or completeness thereof. Unless otherwise provided under UK law, Momentum GIM does not accept liability for irrelevant, inaccurate or incomplete information contained, or for the correctness of opinions expressed.

The value of investments in discretionary accounts, and the income derived, may fluctuate and it is possible that an investor may incur losses, including a loss of the principal invested. Past performance is not generally indicative of future performance. Investors whose reference currency differs from that in which the underlying assets are invested may be subject to exchange rate movements that alter the value of their investments.

Under our multi-management arrangements, we selectively appoint underlying sub-investment managers and funds to actively manage underlying asset holdings in the pursuit of achieving mandated performance objectives. Annual investment management fees are payable both to the multimanager and the manager of the underlying assets at rates contained in the offering documents of the relevant portfolios (and may involve performance fees where expressly indicated therein).
